

Embrace cloud transformation for real-time processing

Take the fast lane to the public cloud

Why do banks like yours need to migrate to the cloud? To realize unprecedented infrastructure advantages. You need a plan to get there – and a banking-appropriate cloud platform as your goal. With Amdocs as your ally, you accelerate your move to the cloud as you strengthen controls and security.

Why wouldn't you move to the cloud? It's resilient, elastic, and secure. Data center constraints disappear. You can do more with fewer obstacles. Access vast compute power and real time data processing.

Financial services face a wave of new requirements

What do these challenges have in common? They call for data crunching at unprecedented speed and scale. Transaction and data batch processing can't keep pace. Financial services providers like you need event-based real-time processing to deliver required speed. On-premise systems lack the elasticity to cost-effectively fit data requirements. The public cloud is the answer, but getting there at scale has proved impossible for many in the industry

To adopt cloud, go fast and achieve significant business value quickly with experienced cloud specialists from Amdocs. We empower banks to migrate entire application portfolios to the cloud in a reasonable timeframe. In the process, we instill cloud-centric leading practices in your workforce so they can thrive in a more flexible infrastructure environment. Our teams hold multiple gold competencies in the Microsoft Partner Network and Premier Partner status for both Google Cloud and AWS, helping you work with the public cloud provider of your choice.

Cloud-first for resilience, elasticity, and security

Across industries, IT and business leaders see cloud adoption as essential, [with more than 85% of organizations going cloud-first by 2025](#). The high-level benefits of the cloud are clear:

- Accelerate modern technology strategies and cloud adoption
- Support the latest in security, governance and compliance requirements
- Drive automation and the use of repeatable processes
- Expand on the scope and volume of data through real-time processing
- Gain visibility into – and more control over – your infrastructure

Goodbye data center, hello higher performance

A leading Canadian bank decided to accelerate its move to the cloud with help from Amdocs. The team started by establishing a foundation for critical workloads. That foundation soon supported hundreds – and then thousands – of workloads in the public cloud. The bank eliminated more than 250 on-premise servers and boosted the performance of its infrastructure, with faster digital banking emerging as a key win for customers.

Let's make banking amazing

Leap ahead with help from Amdocs. Lead by creating superior digital experiences that engage customers wherever they are – fast and seamlessly. We work with banks that make banking amazing by anticipating customer needs, personalizing banking, and getting ideas to market in real time.
